## 1.0 Introduction

The Proficiency Testing Canada PT Program (formerly the CALA PT Program) is accredited to ISO/IEC 17043-*Conformity assessment—General requirements for proficiency testing* and offers PT in support of inorganic, organic and microbiology test methods covering matrices such as water, soil/sediment, oil and air filters. Not all of the Test Groups in this catalogue are covered by the scope of accreditation. For a detailed list of what is covered by the A2LA accreditation please refer to the on-line scope (<https://www.a2la.org>).

With the exception of C05A (microbiology) and C05B (microbiology), samples are provided as whole samples and are ready to analyze. However, some samples may have to be diluted to bring the concentrations within the laboratory's calibration range, as is common practice for customer samples.

In general, each test group is shipped twice per year, one half being shipped in January and June and the other half shipping in March and October. With the exception of 38 and 39, each test group consists of four samples of different concentration.

Proficiency Testing Canada offers a discount to Institutional members of the Canadian Association for Laboratory Accreditation (CALA).

## 6.0 Special Notes

Ψ Cannabis PT samples will only be shipped to laboratories that hold a valid Health Canada licence for cannabis testing.

\* These test groups are not currently included in PT Canada's A2LA scope of accreditation. Please refer to the A2LA web-site for the most current coverage.

\*\* Microbiology samples within Canada will not be shipped without the appropriate Public Health Agency of Canada license or a claim that the participant is exempt from licencing.

**Fees:** With the exception of government laboratories that have provided a valid purchase order, all fees must be paid in advance. Failure to make payment will result in samples not being shipped. All fees are in Canadian dollars.

**All Test Groups:** The indicated concentration ranges are approximate values only. Actual concentrations may be higher or lower than those indicated.

**General Organics:** Because the assigned values used for the calculation of z-scores are based on consensus data, laboratories that are using isotope dilution procedures may observe a bias relative to the assigned values
